

SUPPLIER QUALITY REQUIREMENTS (SQR-1)

Effective: February 1st 2018

1.0 APPLICABILITY

This document defines restrictions and quality system requirements applicable when goods and services are procured to Moog design authority Build-to-Print and Build-to-Specification part numbers. Appendix A (clauses A1.0 to A12.0) applies to Aircraft Group orders only. Except where specified in Appendix A, these requirements do not apply to Standard Catalog Hardware; often referred to as Commercial-Off-The-Shelf ("COTS").

Standard Catalog Hardware is defined as a part or material that conforms to an established industry or national authority published specification, having all characteristics identified by text description, National/Military Standard Drawing, or catalog item.

2.0 ORDER OF PRECEDENCE

The order of precedence for Moog purchases is defined in Moog Standard Terms and Conditions on the Purchase Order. Note that the purchase order cannot change design data.

3.0 PROCESS RESTRICTIONS

Unless otherwise directed by the Purchase Order, the following restrictions apply:

3.1 Glass Beads are prohibited from use in the processing or manufacturing of parts related to all Moog Purchase Orders unless allowed by specific note on the Moog drawing. Requests for exceptions shall be submitted to the Moog Buyer listed on the Purchase Order for each specific part number. Suppliers that use glass beads in their normal processing are required to have an effective method of segregation to prevent contamination of Moog hardware.

3.2 Life-limited items such as adhesives, compounds and elastomers, shall have 75% or greater storage life remaining upon receipt at Moog. In particular, elastomers shelf life shall be based on SAE ARP5316 (available at www.sae.org). The supplier shall identify on the shipped paperwork the manufacturers name, compound trade name, batch number, cure date, specific gravity range and QPL approval status, as applicable, by Moog print for each lot.

3.3 Electronic Components (i.e. transistors, integrated circuits, connectors, etc.) ordered to military specifications - The component manufacturer and lot / date code for each component must be identified on the packing list.

3.4 Electrical Discharge Machining (EDM) is not permitted for manufacture of parts related to all Moog purchase orders unless allowed by specific note on the Moog drawing, or via an explicit written authorization subsequent to a formal approval by Moog Engineering. Requests for exceptions or waiver of this requirement shall be submitted to the Moog Buyer listed on the Purchase Order for Moog Engineering approval for each specific part number.

3.5 Electrostatic Discharge Protection - Devices designated by the drawing as static sensitive, or otherwise applying static sensitive technology, must be properly handled, packaged, and labeled in conformance with ANSI /ESD S20.20 (www.ansi.org), BS EN 100015-1 (www.bsigroup.com) or MIL-STD-1686 (<http://quicksearch.dla.mil>).

4.0 QUALITY REQUIREMENTS

Unless otherwise directed by the Purchase Order, the following quality system requirements apply:

4.1 Quality System Requirements - Suppliers must maintain a quality system that, at a minimum, complies with ISO9001 (latest revision at time of Purchase Order). When supplier compliance and/or certification to AS9100, ISO9001, AS9110, EASA Part 21, EASA Part 145, or FAA 14 CFR part 145 is specified by Moog, the supplier is responsible to notify the Moog Buyer in writing within 5 working days of any changes in Quality System status, including extensions or reductions in scopes of approval, third party and/or regulatory Quality Approvals that are either gained or withdrawn. The supplier's loss of certification or failure to notify Moog of their loss of certification could result in being disapproved as a Moog supplier.

4.2 Record Retention – Suppliers shall retain quality records for minimum of (10) years from the date of shipment, unless a longer period is otherwise specified. If original records are not maintained, the method for transferring original records to electronic images, shall comply with FAR 21, subpart 4.7. Quality records include the following but not exhaustive list: Approved Certificates of Conformity, Test Reports, Raw Material Certifications, Special Process Certifications, First Article Inspection Reports (FAIR), Route Cards/Travelers, and Calibration Records. This data shall be made available to Moog upon request, at no extra charge. Records shall be appropriately identified in accordance with customer, regulatory and company defined requirements. Storage facilities shall provide environmental conditions to prevent deterioration or damage and to prevent loss. Records in storage shall be protected from unauthorized access. The nature of the information in the records, as well as its format, dictates the method by which they shall be destroyed. When records contain sensitive information (such as design detail, proprietary info, ITAR restricted info, etc.), they shall be disposed by irreversible destruction methods such as shredding, or "erasure"/reformatting for electronic/magnetic media.

4.3 Calibration System - Calibration of measuring and test equipment used for product acceptance shall be traceable to established international or national measurement standards (e.g., BSI, NIST, UKAS, etc.). Procedures for periodic calibration, certification, maintenance of tools and equipment, and an action plan, should measuring and/or test equipment be found to be out of calibration, shall be established and followed. The action plan shall contain, as a minimum, item identification (model, manufacturer, and serial number), found condition (including span/range and accuracy), date condition found, date of previous calibration, notification details, and any other pertinent measurement details.

SUPPLIER QUALITY REQUIREMENTS (SQR-1)

Effective: February 1st 2018

4.4 Inspection System - Suppliers shall develop inspection procedures and maintain records of inspection. Records *shall* include evidence of inspection for all attributes (e.g. first article inspection, acceptance test data) of products / processes supplied to Moog, show the product has been inspected and/or tested during all stages of manufacturing, identify the name of the individual (i.e. with stamps, etc.) who certified the results, and where applicable include the results of the inspections and tests.

The Moog buyer must be notified in writing prior to any changes in product, manufacturing location, or process definition that were not requested by Moog, in writing. Notification shall describe the change or changes that are being proposed. Moog Quality reserves the right to require its approval of the product, manufacturing location or the process change before the Supplier forwards the product. The supplier is also required to submit a new full or delta first article inspection report, if the change(s) affect any of the existing approved first article inspection report characteristics.

4.5 Travelers - Suppliers shall maintain a traveler, router, process flow sheet, or equivalent control mechanism that directs procedures appropriate for the control of quality and configuration through all stages of production. For Moog designed hardware when Moog changes P/Ns, dash numbers, or P/N revisions AND there is work in process (WIP) for a given contract, the rework instructions must be submitted in writing to the Moog Buyer to obtain Moog Engineering approval prior to rework.

4.6 Nonconforming Product - Suppliers shall ensure that non-conforming products are identified, segregated, and properly dispositioned as required per supplier's procedures. Only product that conforms to specified requirements shall be shipped to Moog. Dispositions of Use As Is or Repair for products under Moog design control shall require written authorization prior to shipment. Moog does not grant Material Review Board (MRB) Authority to suppliers, unless granted in writing by Moog Quality Engineering. Moog reserves the right to audit for compliance. Any reworked parts shall be re-inspected and/or tested prior to shipment to Moog.

4.7 Non conformance Affecting Shipped Products- Suppliers are required to notify the Moog Buyer within 24 business hours of discovering any nonconformance that exists or is suspected of existing on hardware that has previously been shipped to Moog. This notification shall include the following information:

- Affected Part number(s), process(es) and name(s)
- Description of the nonconforming condition and the affected requirement (Both requirement and actual condition)
- Quantities, dates, purchase orders, and destination of delivered shipments.
- Lots, batch numbers, serial numbers or date codes as applicable of the affected lot.

4.8 Supplier Deviation Request (SR) - Suppliers shall use the electronic TipQA SR type nonconformance, accessible through the [Supplier Portal](#), to request review of nonconforming material. In the event that a supplier is unable to access TipQA, they shall contact the applicable Moog buyer for assistance.

Nonconforming material shall not be shipped to Moog without an approved TipQA SR type nonconformance. In addition, all nonconforming product shipped to Moog 1) Must be clearly identified as non-conforming product and packaged separately from the acceptable product 2) Must be accompanied by a copy of the approved TipQA SR type nonconformance(s), and 3) The applicable TipQA SR number(s) must be clearly listed on the packing slip and Certificate of Conformance and FAIR if applicable.

For corrective action requested, the supplier shall: 1) consider the details of the recorded non-conformance/corrective action and request clarification if necessary from the initiator of the request; 2) complete and respond to both the containment and whole corrective action requirements within the timeframe indicated on the non-conformance notification providing an effective short term and long term corrective action.

4.9 Statistical Techniques - Suppliers are responsible for understanding and reducing variation within processes, and are encouraged to use control-charting techniques. When control charting is not performed, sample inspection of all attributes shall be performed to [ANSI/ASQ Z1.4](#) (MIL-STD-105), Level II, 1.0 AQL, c = 0, or an equivalent plan approved by Moog. Suppliers using sample (incl. Moog approved) inspection plans are not relieved from the responsibility for all attributes on the part/assembly.

4.10 Special Processes – The following are considered special processing, as a minimum: Heat treatment, Plating operations, Chemical processing, Chemical cleaning, Nondestructive Testing, Welding/Brazing, Shot Peening, Ion Vapor Deposition (IVD), High Velocity Oxygen Fuel (HVOF), other specialty coatings. When processing requirements are defined by Moog (e.g. ASTM E1417) or by Moog's end customer (e.g. BAC 5728), processors must be approved for the process specification by Moog (for Moog defined requirements) or by the end customer (for customer defined requirements). Moog approved special process suppliers (listed at www.moog.com/suppliers/asps) shall be used on parts related to all Moog purchase orders where Moog defines the processing requirements, unless the supplier is themselves approved for the process specification by Moog, or is otherwise directed by a Moog supplemental quality requirement. Suppliers may verify their own approval status via the [Supplier TipQA Portal](#). The use of an approved sub-tier does not relieve the supplier from responsibility to furnish acceptable supplies. When Moog's customer's specifications are called out in the drawings (e.g. BAC spec, NASA spec, etc.), supplier shall use processors that are currently approved/certified by the end customer for the process specification and, in that case, the processor need not also be Moog approved. Suppliers are expected to establish and follow a formal documented process to verify, during contract review and prior to processing the parts, that either they or their chosen sub-tier are an approved processor for the Moog or end customer specification. When requested by Moog, suppliers must be able to furnish objective evidence (e.g. internal production records, certifications from sub-tiers) that the process has been followed, and that parts have been processed by approved suppliers according to defined process specifications.

SUPPLIER QUALITY REQUIREMENTS (SQR-1)

Effective: February 1st 2018

4.11 Supplier Control - Suppliers, including dealers and distributors, are responsible for ensuring that the applicable requirements of this purchase order are imposed on lower tier procurements for raw material, components or process services being used in the manufacture of products or services being provided.

4.12 Prohibited Sources - Moog suppliers and/or sub-tier suppliers are prohibited from using any source listed on the US government Excluded Parties List System (EPLS) (ref. <https://www.sam.gov>) in the production of products to be delivered to Moog.

4.13 Counterfeit Parts Prevention - The supplier shall have a program in place to prevent the delivery of counterfeit parts and materials to Moog. All parts, materials and assemblies (electrical, mechanical, raw material) included in the hardware delivered to Moog shall be procured directly from the Original Component Manufacturer (OCM) / Original Equipment Manufacturer (OEMs), or from the OCM/OEM authorized-distributor. If it is determined in a specific instance that this is not possible, an SR type NC shall be submitted by the supplier to the Moog buyer within (5) working days of this determination. The supplier is responsible for the flow down of this requirement to its sub-tier contractors and their compliance to it. Further guidance on counterfeit parts avoidance can be found in SAE documents AS5553 (Electronics) and AS6174 (Material) (www.sae.org).

4.14 Right of Entry – Representatives of Moog, Moog’s customer, and other regulatory authorities *shall* have access to supplier’s facility and all other facilities involved in the fulfillment of the Purchase Order, where they *shall* have access to all procedures, practices, processes, associated documents, and records related to quality assurance, quality control, and configuration control. The supplier *shall* notify the Moog Buyer in writing to any significant facility or organizational changes such as company name, location, or senior quality management. Any change of location by the supplier *shall* require a full first article inspection on these parts. Moog reserves the right to determine and verify quality of work, records, and material. Such visits *shall* not preclude subsequent rejection of product and do not absolve the supplier of its product integrity responsibilities. Moog reserves the right to audit for compliance to all requirements.

4.15 Traceability & Product Identification - Supplier shall ensure that individual articles and materials and lots thereof are identified and segregated from all other articles, materials, and lots at all times. Records for articles shall indicate the part number, revision level, lot number and if applicable the serial number and associated detailed information. Records for materials shall indicate type, applicable serial numbers, lot numbers, heat numbers, batch, date code, cure date, etc. Material or articles furnished by Moog for outside operations must remain identifiable by the Moog supplied lot or serial number. This number must be recorded on all applicable supplier paperwork.

4.16 Certificate of Compliance - The Certificate of Compliance (CofC) shall be shipped with the product to Moog. The Certificate of Compliance is a quality record that shall include Moog part number and drawing revision, Military, Federal, or Industry specification number and revision, Purchase Order number and line item, quantity, serial numbers (if applicable), work order number (if applicable), date shipped, manufacturer’s name and authorized acceptance authority stamp or signature. The CofC should include explicit confirmation of compliance to all PO requirements including drawings, specifications, SQR-1 and all S-clauses. For parts returned by Moog to the supplier, the CofC for the reshipment must contain the debit memo number and a summary of work performed or statement that part was replaced.

In addition, when requested the supplier shall be able to furnish information on their source(s) of supply that could include items such as serial numbers, lot numbers, heat numbers, batch, date code and cure dates and Qualified Products List approval status as applicable.

4.17 Responsibility for Conformance - Acceptance of product shall not be used as evidence of effective control of quality by the supplier, and shall not absolve the supplier of responsibility for acceptable products or preclude subsequent rejection by Moog customers.

4.18 Industry Specifications and Standards - For all Military, Federal, and Industry specifications and standards, unless specified on the contract or purchase order, the supplier may use either the latest specification or the specification in effect at the time of the PO. Moog reserves the right to request a different revision that would be specified on the purchase order.

4.19 Training -Suppliers shall ensure that all personnel performing activities on Moog product affecting quality have been suitably trained per supplier procedures or to Industry standards if applicable. Personnel performing assigned tasks must be qualified on the basis of appropriate education, training, and/or experience. The supplier shall ensure that training records are maintained and available upon request.

4.20 Handling, Packing, & Preservation - It is the responsibility of the supplier to ensure that the packaging is adequate to protect the components during transportation, handling, and storage. Packaging containers shall be appropriate for the size, weight, and fragility of the components being packed.

Revision History

Issue	Description
10 Aug 2016	Added Appendix A for AG orders.
1 Oct 2016	Various changes to Appendix A.
1 Feb 2018	Various changes.

Supplier Quality Requirements (SQR-1): Appendix A
Supplemental Quality Requirements for Moog Aircraft Group Orders
Effective: February 1st 2018

A1.0 Application

- The requirements of this SQR-1 appendix supplement the requirements of SQR-1 for Moog Aircraft Group purchase orders.
- All requirements of SQR-1 including this appendix A, all quality clauses (S-Clauses), and all flow-downs contained in the purchase order(s) shall be complied with. Supplier shall communicate any conflicts to Moog Buyer via an SN type NC prior to any shipments.
- Requirements 2 through 11 of this appendix A of SQR-1 are applicable to production goods & services procured by all Aircraft Group sites except for standard catalogue or Commercial-Off the-Shelf (COTS) items.
- Requirement 12.0 of this appendix A of SQR-1 is applicable to all distributors, including those supplying standard catalogue or Commercial-Off-the-Shelf (COTS) items to Military, Federal, or industry specifications and standards.

A2.0 Supplier System Requirements

- With the exception of suppliers for the Navigation Aids business at Moog Salt Lake City, all suppliers for Aircraft Group orders shall maintain a Quality Management System that is compliant with AS9100 series standards. Effective January 1st 2020, all suppliers for Moog Aircraft Group orders (except Moog Salt Lake City), are required to be certified to a relevant AS9100 series standard.
- Suppliers shall notify Moog via an SN type NC of any changes in the Management representative with assigned authority and responsibility for the Quality Management System.
- Suppliers shall comply with AS9100 requirements regarding the application of Acceptance Authority Media (AAM) requirements. Suppliers shall ensure that within their organization and its supply chain, the use of AAM is clearly defined within the Quality Management System. Suppliers shall, upon Moog request, be able to demonstrate evidence of communication to their employees and supply chain. Suppliers shall communicate to their employees and their sub tier suppliers the impact of their work on Moog product conformity, and their contributions to product safety. Additionally, this communication shall reinforce the importance of ethical behavior in their daily activities. The use of AAM must be considered as a personal warranty of compliance and conformity. Suppliers shall maintain compliance to AAM requirements by assessing its process and supply chain as part of its internal audit activities, including but not limited to: application errors, untimely use, misrepresentation, and training deficiencies.
- Suppliers shall have an active TipQA account for communication purposes (e.g. Supplier performance rating, Requesting deviations, providing corrective actions, etc.). Refer <http://www.moog.com/suppliers> for details.
- Suppliers must respond promptly and effectively to corrective actions issued by Moog. Repeated failure to promptly and effectively contain non-conformances and address underlying root-causes may result in escalation, including but not limited to:
 - Moog or 3rd party source inspection and audits of supplier's products and processes.
 - Participation by the supplier in Moog's Escape Prevention Planning and/or Supplier Improvement Processes.
 - Suspension, Disapproval and removal from the Moog Approved Suppliers List.
- Contract and Purchase order review shall be conducted for all purchase orders. Contract and Purchase order reviews shall be undertaken by personnel having the relevant knowledge and experience. Reviews shall ensure that supplier has the capability, capacity and resources to meet all of the purchasers' requirements. Supplier shall notify the Moog Buyer of any instances where the Moog requirements cannot be met prior to beginning production. All such requests for clarification, waiver or change of any Moog requirement shall be submitted via a TipQA SN type NC, and suppliers must not commence manufacturing of parts for Moog orders until the disposition has been determined by Moog.
- Suppliers shall maintain a Foreign Object Debris/Damage (FOD) control program in accordance with the requirements of AS9146, *Foreign Object Damage/Foreign Object Debris (FOD) Prevention*, available from <https://saemobilus.sae.org/>.

A3.0 Record Retention

- Suppliers shall retain Quality records for a minimum of (15) years from the date of shipment unless a longer period is otherwise specified. Refer to clause 4.2 for the type of records for which this is applicable.

A4.0 Data Submission

- Data submission to Moog is required for First Articles and Qualifying Lots as described in clause A4.0, A5.0, A6.0, and A7.0.
- When specifically requested by Moog, Suppliers shall make specified quality data and/or approved design data available in the English language.

A5.0 First Article Inspection Report AS9102 (FAIR)

- First Article Inspection shall be performed per the requirements of SAE AS9102. The First Article Inspection Report (FAIR) and a clearly identified first article part shall be submitted to Moog with the first shipment of parts on the initial purchase order for the applicable revision of the part. The FAIR must include explicit confirmation of compliance to all drawing requirements and specifications, requirements listed on the purchase order including SQR-1 and S-clauses. This includes part appearance, packaging and preservation requirements where these are specified.
- A Delta or Partial First article shall be performed for the affected characteristics per the requirements of AS9102 and the report shall be submitted to Moog with the first shipment of parts which require a Delta first article.
- A Delta or Partial First article shall be performed for the affected characteristics per the requirements of AS9102 when there is a change in location of any machine used to fabricate the parts within the facility and the report shall be submitted to Moog with the first shipment of parts produced after the change of location.

Supplier Quality Requirements (SQR-1): Appendix A Supplemental Quality Requirements for Moog Aircraft Group Orders

Effective: February 1st 2018

A6.0 Product Acceptance Requirements

- Prior to shipment the supplier is responsible for ensuring that 100% of all attributes on all parts produced are in accordance with the Moog requirements. See following bullets for additional information.
 - A manufacturing lot is defined as all parts manufactured at the same time from the same materials, or processed together through all operations, unless otherwise specified in the Moog drawing.
 - In-process inspection shall occur throughout machining and processing of a manufacturing lot.
 - The method of inspection shall be suitable and capable for each type of feature or inspection being performed (Example, measurement instruments should have 10 times the resolution of the tolerance being measured).
 - Parts shall be 100% visually inspected for loose or hanging burrs, machining chips, handling damage, and FOD (Foreign Object Debris) prior to shipment.
- Suppliers shall perform eye tests every 2 years for anyone performing inspection activities on Moog hardware. Visual Acuity shall be, at a minimum, Snellen 20/40, Jaeger 1 or equivalent with Depth perception. Suppliers providing electrical/electronic hardware shall also perform Ishihara color perception test, or equivalent. Supplier employees failing eye tests shall not perform acceptance of Moog hardware.
- Suppliers shall buy thread/spline gauges from commercial manufacturers (commensurate to the tolerance of the part) and shall not use internally manufactured gauges.
- Suppliers are encouraged to utilize SPC (Statistical Process Control) based sampling plans in lieu of 100% inspection and may do so for those features with a Cpk (Process Capability) greater than or equal to 1.33. For additional guidance, consult ARP9013, Statistical Product Acceptance Requirements available at <http://standards.sae.org/>.
- Sub-delegation of the final product verification for the contracted part before the shipment is not allowed.

A7.0 Changes in Organization, Business System, Product, Manufacturing Location, or Process Definition

- Suppliers shall use the electronic TipQA SN type nonconformance, accessible through the Supplier Portal, to notify Moog of changes in organization, business system, product design or specification, manufacturing location or process definition not requested by Moog. Such notification must be given as early as practicable, and should clearly describe the change or changes that are being proposed. Production location changes will be managed according to Moog's Supplier Led Transfer Process. Moog reserves the right to require approval of any changes prior to the supplier shipping any product to Moog, our partners or customers. Suppliers must not ship any product until so authorized.
- Supplier agrees not to make any change in materials or design details which would affect the goods or any component parts thereof with regard to 1) part number identification, 2) physical or functional interchangeability, or 3) repair and overhaul procedures and processes and material changes which affect these procedures without written approval of Moog buyer. If such approval is granted, all part numbers and the originals of all drawings and data shall be revised accordingly.
- Changes to the process that affect the method of manufacture or part configuration require, as a minimum, process re-validation and submission of delta first article report to Moog per the requirements of AS9102. This first article report shall be shipped with the first lot of parts affected by the changes.
- The Moog process for SN-type NC may be found at: [SN-Type NC Link](#)

A8.0 Part Appearance, Preservation and Packaging

- It is the expectation that the supplier will communicate with Moog as necessary to establish appearance, packaging and preservation techniques required. Where specified, part appearance, packaging and preservation must also be reviewed as part of the FAIR per section A5.0.

Appearance Requirements

- Parts that have been subjected to machining processes, and selected other build-to-print parts, must meet the workmanship standards and requirements defined by Moog, available at <http://www.moog.com/suppliers>.
- In general, all parts supplied to Moog should have consistent appearance with respect to color, texture, machine marks, etc. unless allowed by the drawing, specification, workmanship/visual standard. Parts should also be free of random marks, blemishes or touch-ups unless allowed by the specification, drawing, workmanship/visual standard.
- Questions regarding specific appearance concerns should be submitted to the Moog buyer via an SN-type NC (before manufacture) or an SR-type NC (post manufacture) with the appropriate detail (problem description, pictures, cause, recommended actions, etc.)

Preservation requirements

- Parts shall be preserved appropriately to prevent handling damage, facilitate storage and prevent corrosion during manufacture and shipment to Moog. In general, in order to avoid unintended physical damage, part-to-part contact must be avoided at all stages of the manufacturing process for parts supplied to Moog.
- The type of preservation technique utilized may depend on the materials being preserved and the intended use and application. It is expected that the preservation methods (e.g. oils) will allow storage without degradation/corrosion for a minimum of 12 months from the date of receipt.
- Preservatives that congeal over time and/or are difficult to clean should not be used.

Packaging requirements

- Appropriate part separation dividers or unitized packing shall be used to prevent part to part or packaging damage.
- Mixing of manufacturing lots of the same part number within a package is not allowed. Each manufacturing lot shall be clearly identified and segregated in separate packages.

Supplier Quality Requirements (SQR-1): Appendix A
Supplemental Quality Requirements for Moog Aircraft Group Orders

Effective: February 1st 2018

- Individual lot packages may be combined in a single outer container, if each inner container is clearly labeled with the lot information and the lots are individually listed on a shipping list as separate line items.
- Packaging Labels shall contain the following information: date of shipment, purchase order number, part number and quantity in both numerical and barcode 3 of 9 format.
- Fragile packages shall be labeled as such.
- Material with shelf life requirements shall have the shelf life/expiration date clearly marked on the packaging and the shipping paperwork.
- All chemicals shall be accompanied by a relevant Safety Data Sheet (SDS) (formerly called Material Safety Data Sheet (MSDS)) with each shipment.

A9.0 Obsolescence reporting

- In the event of any risk of confirmed obsolete product (such as end of life notification, discontinuation notice, GIDEP Diminishing Manufacturing Sources (DMS) notice, etc.), materials, or services, the supplier shall contact the relevant Moog buyer and advise of all affected parts numbers or materials.

A10.0 Raw Material, Castings and Forgings

- All suppliers of raw material must comply with S275 when applied to the PO. Hand forgings (or open-die forgings) are considered raw material and suppliers are therefore subject to the requirements defined in S275.
- Suppliers of Moog build-to-print products, excluding castings and forgings, must comply with S275 when applied to the PO. When applied, compliance to S275 requires completion of the prescribed raw material inspections and submission of the included checklist. 3rd party lab tests may be required for some materials. See S275 at <http://www.moog.com/suppliers/ssqr> for more information.
- Suppliers of Moog build-to-print products manufactured from castings or forgings (including hand forgings), must submit a change notification and approval request via the SN-type notification process whenever a change of source is being considered.
- For simplified compliance material may be purchased pre-inspected to S275 from a Moog-approved raw material supplier, found at <http://www.moog.com/suppliers/arms>. Only suppliers on this list are permitted to supply material with the Moog S275 checklist completed.
- All raw material certifications, test reports, inspection reports, or other traceability documents in compliance to S275 requirements shall accompany the shipment of products to Moog.

A11.0 Special Processes – Accreditation and Approvals

- Effective January 1st 2020, special process providers for Moog Aircraft Group make-to-print orders must be NADCAP accredited in addition to being Moog approved. Specifically, this concerns the following NADCAP categories for Moog orders:
 - Aerospace Quality System
 - Heat Treat
 - Welding
 - Non Destructive testing
 - Surface Enhancement
 - Materials Testing
 - Chemical Processing
 - Coatings
- The following circumstances are exceptions to the NADCAP accreditation and Moog approval requirements:
 - If the special process is within the NADCAP categories above, but the specification is proprietary to Moog or to the seller and not specifically covered by NADCAP (e.g. EPS11171, Titanium Nitriding), the processor is required to be NADCAP accredited for the NADCAP categories above, and Moog will separately verify compliance to any proprietary process specifications.
 - If the special process is outside of the NADCAP categories listed above, the process is not required to be NADCAP accredited, but the supplier must be approved by Moog for that process.
 - When Moog's customer's specifications are called out on drawings (e.g. BAC spec, Lockheed, etc.), seller shall use processors that are currently approved/certified by the end customer and, in that case, the processor need not also be Moog approved. The processor shall be NADCAP approved when contractually required by the end customer.

A12.0 System requirements for Distributors

- Suppliers shall maintain a Quality Management System that is either AS9100 or AS9120 *compliant*. Effective January 1st 2020, all suppliers for Moog Aircraft Group orders (except Salt Lake City) must be *certified* to AS9100 or AS9120.
