ELECTRIC MULTI-AXIS TEST SYSTEMS
PLUG-IN READY FOR LOAD/DEFLECTION OR CYCLIC TESTS

PRECISION, EFFICIENCY AND RELIABILITY. VALUE FROM DAY ONE.
ELECTRIC MULTI-AXIS TEST SYSTEMS.
RELIABLE. FLEXIBLE. PRECISE.

Choose Moog.
Rising energy costs and increasing environmental regulation drive test design engineers to seek an electro servo solution without sacrificing precision, speed, or productivity. Our Electric Multi-Axis Test Systems provide an alternative to traditional hydraulic and pneumatic applications. Moog delivers world-class motion control solutions to a variety of applications, ensuring high speed and high force in demanding industrial environments.

Reliable.
Boasting a typical product lifetime of 10+ years, Moog Electric Multi-Axis Test Systems provide the reliability you need, resulting in reduced waste due to maintenance issues or failures during testing.

Extraordinary Value.
Electric Multi-Axis Test Systems are designed with your bottom line in mind. The completed machines eliminate extra items, operation and maintenance costs needed with hydraulic or pneumatic test systems.

Unrivaled Precision.
We understand your need for precision and repeatability. A built-in Encoder allows precise position control or operate your test with bumpless mode switching to control force repeatably from very small to large loads.

Easily Configurable.
Our plug-n-play electric actuators and simplified feature-rich user interface provide a functioning platform out of the box to perform tests the same day, without needing hours of configuration to start.

Clean Lab Integration.
The low noise actuators have no oil or air leaks to manage, can operate in hot or cold environments, and save all the idle energy of pumps and air compressors.

Unsurpassed Support.
We’ve seen it all. Moog expertise in test laboratories like yours ensures high value test results every time. With leadership and support available in 26 countries, Moog delivers technology, innovation, and service around the globe.
Choose Electric for your Test
There are plenty of choices when selecting the technology best suited for your test system. Here are a few reasons why electric should be your top pick.

Longer Lifetime
Long-lasting performance and reliability increases machine lifetime and your return on investment. The lifetime of Moog Electric Multi-Axis Test Systems is typically 10+ years. Request a lifetime calculation data sheet from your Moog representative.

Smaller Footprint
Electric systems are typically smaller with three main components in contrast with hydraulic systems which include the HPU, oil coolers, piping, HSMs, hoses, and actuator.

No Extra Cost
There is typically no extra cost in selecting an electric system vs. hydraulic. Without the need for expensive food grade oils, tanks, hoses, pumps, filtering systems, etc., electric systems are extremely cost effective.

Total Control
Electric Multi-Axis Test Systems feature infinite and extremely accurate control of speed, position, and force – all crucial elements to your testing.

Cleaner Operations
Electric Multi-Axis Test Systems are better for the environment, as they do not require disposal of oils. Many industries are moving away from costly oil-based systems to reduce energy, reduce their carbon footprint, and remove oil from their sites.

Easier To Install
Moog Electric Multi-Axis Test Systems are relatively low maintenance. Electric systems are much easier to install and control with digital and analogue signals to control speed, force, and precision.

Lower Noise Levels
Health and safety directives place pressure on companies to reduce factory noise. Moog Electric Multi-Axis Test Systems typically produce 30% lower noise levels, resulting in less stress over meeting regulations.

No Flow Rate Problems
Low temperatures can often result in flow rate issues. Electric Multi-Axis Test Systems can operate in hot or cold environments with simple insulating or cooling actions.

Health And Safety Benefits
In addition to lower noise levels, electric systems do not have the ability to create dangerous high pressure hydraulic oil leaks. Slip hazards, exposure to cancer-causing fluids, and dirty oil contamination are not of concern when using Moog Electric Multi-Axis Test Systems.

No Fire Risks
In high temperature applications, there is no fire risk of oil in electric system. Therefore, no fire resistance fluids are needed, resulting in less expense and health concerns.
SYSTEM OVERVIEW

With the Electric Multi-Axis Test System, Moog offers a complete testing solution. These systems provide an alternative to traditional hydraulic or pneumatic actuation and include one or multiple electro-mechanical actuators with a matched motor drive control cabinet and a real-time test controller. A range of electric high performance Moog actuators with different strokes, velocities and forces are available for a wide range of applications. All necessary electronics to control the actuators (servo-drives, circuit breakers, line filters, etc) are contained in a control cabinet. The motor drive cabinet can be fixed or portable, and has an intuitive, quick inter-connection panel for cabling to supply power, the actuator, and the Moog Test Controller.

Pre-configured packages are available. Many other product combinations are possible so contact Moog to configure a system with the performance you need.
APPLICATIONS AND SOLUTIONS

SEAT BACK FATIGUE SYSTEMS

The servoactuator provides precise control of position or force perfectly suited for testing of seating systems and components. Electric multi-axis test systems provide better control of the loading, stroke, and frequency required for these tests because appropriately sized electric actuators with low inertia servomotors have no difficulty with loading ranges based on occupant movement nor the pressure fluctuation and seal friction issues of hydraulics and pneumatics at these loads.

DOOR CLOSURE TEST SYSTEMS

Closure tests are a vital part of measuring vehicle durability and quality. With the hood, door, sliding door, tailgate, decklid and more requiring cyclic durability regularly combined with hot/cold/humidity environments, Electric Multi-axis test systems can provide precise and repeatable position, velocity and force and record it all to provide reliability and confidence in your test results.

SEAT BELT ANCHORAGE TEST SYSTEMS

Moog electric multi-axis test systems are well suited for seat belt anchorage or similar strength tests because the industry standard load cells and absolute encoders provide fine resolution, the servomotors ramp loads smoothly and quickly, and the real-time test controller synchronizes all actuators by providing commands, recording signals, and monitoring safety data at thousands of points per second.
ELECTRIC ACTUATOR

High performance solutions delivers world-class motion control to a wide array of linear applications, ensuring high speed and high force in today’s most demanding industrial environments.

Continuous Peak
min stroke for continuous cyclic movement

These actuators represent a subset of the available models and have been identified to meet the performance of similar testing applications. The models in **BOLD** represent the selected models for the test applications on the previous page and the performance plots on this page.
The Moog Test Controller is a 1 to 32 channel real-time modular control system that can control or collect data from any hydraulic or electric test system. The robust and compact modules have a wide range of transducer inputs and control outputs that can be easily configured for optimum use. The Moog test software allows the end user to control and record all of these signals in an easy to use format providing maximum value for many years of reliable usage.

MOOG TEST CONTROLLER

CONTROL CABINET

All electronics to control the actuators (servo-drives, circuit breakers, line filters, etc) are contained in a control cabinet. The control cabinet can be delivered free-standing or with transport wheels, and has an intuitive and quick connection panel to interface to the Moog Test Controller. Multiple cabinets can easily be put in series to the same controller, creating extra flexibility in the test setup.

CABINET CONNECTIONS

For Moog Servo Drive 6A, 12A, 24A and 60A

- **Power Cable**
  - CB88616-503-015
  - Y distributor cable
  - Parallel: 4P-MS/2x 4P-FS

- **Ethercat Cable**
  - CB88616-130-010
  - Network cable: NBC-MSD/1,0-93G/MSD SCO

- **Emergency Coupling Circuit**
  - CB88616-505-010
  - EM cable: 12P-MS/12P-FS

- **Emergency Loopback Terminal**
  - CB88616-170-010
  - Sensor/actuator cable: SAC-SP-MS/5.0-186/FS SCO

- **Enable Cable**
  - CB88616-170-010
  - EM-Jumper: EM-OUT

**Dimensions**
- Depth: 612mm
- Height: 1400mm
- Width options: 600 / 800 / 1200mm
- Cabinet width is depending on channel count and size. Multiple cabinets can be selected to support a maximum of 9 channels

**Ambient Operating Temperature**
- 10-30°C
- Non operating: -20-55°C
- Storage: -25-55°C

**Mains power**
- 3x400VAC - 440VAC - 460VAC +- 10%
- 50/60 Hz
- Three Phase + PE

**Fusing**
- Mains fuse type C
- Mains fuse rating depends on amount of channels and size of channels.
- Fuse starts at 3x16A

**Power Consumption**
- Power Consumption is depending on channel count and applied signal.
- 1 Size 3 actuator typical: 1000W

**Cabinet base options**
- Fixed base (forklift transportable)
- Wheels

**Operating Relative Humidity**
- 20-80% non-condensing
- Non operating/storage 10-95%

**IP rating**
- IP54

Included in cabinet order
- Moog Servo Drive G392-0xx-100P00x Pending on actuator
- Power Supply 24VDC
- Moog Mains Choke Pending on servo drive
- Safety Circuit Integration
- Logic protection 24VDC
- Drive protection 3VAC

**Cabinet provides:**
- Moog Servo Drive installation: CE conformity
- Safety Circuit (slave)
- EtherCAT (slave)
- Supply Power for Moog Servo Drive
- Actuator Protection (Position Velocity Guard)
- Optional Manual Actuator Control (Slow extend / retract)

**Required**
- Motor Cable 10[m]
  - C08336-001-xxx
  - CB05708-001-xxx
  - CA98676-001-xxx

- Encoder cable: 10[m]
  - CB05269-507-XXX

SOFTWARE TO MEET YOUR NEEDS

Moog Integrated Test Suite is the core to operating complex tasks in easy-to-use ways. Complementing the Integrated Test Suite software are several optional application packages to expand control, capability and test performance.

MOOG REPLICAION
Replicate time history files using state-of-the-art algorithms in an easy yet powerful way

MOOG RUNNER
Build complex, nested durability tests through simple instructions. Run and monitor the progress of the durability test and specimen

MOOG SINESWEEP
Measure the resonant frequencies of your test specimen. Run sine sweep durability tests

MOOG VIBRATION
Run real-time closed loop control to defined random vibration frequency spectra (PSDs)

CONTROL YOUR TEST WITH THE MOOG INTEGRATED TEST SUITE

Configure, calibrate and tune equipment with easy-to-use setup screens and then build and play simple to complex test sequences for durability tests.

TEST PRODUCTS

Moog engineers are always ready to meet your unique application needs with building blocks or complete turnkey systems that include hydraulic and electric test actuators, servo valves, hydraulic service manifolds, test controllers, software and more.

SERVO VALVES

Because we design our renowned Moog Servo Valves, the world standard in performance and durability, you’re assured of a system tailored to your exacting requirements.

HYDRAULIC SERVICE MANIFOLDS

The Moog Hydraulic Service Manifold (HSM) provides on/off hydraulic pressure with an adjustable transition from off to high pressure. Filters protect sensitive servo valves and accumulators provide instantaneous flow or pressure damping when needed. Several flow-rating sizes with 1 to 4 station options are available.

POLYMER BEARING ACTUATOR

The Moog Polymer Bearing Actuator was designed for higher reliability and safety. The 086-4 series actuator has a cushion at each end to ensure that the actuator will be decelerated before reaching end of stroke in both directions. The actuator’s advanced coating used on the rod significantly improves seal wear for long life and less maintenance. A stainless steel rod utilizes proprietary seals and this unique rod coating to provide several performance advantages. This design also provides for a cleaner hydraulic operation creating a more environmentally friendly lab.

HYDRAULIC AND ELECTRIC SIMULATION TABLES

The human rated Electric Simulation Table, with the small Stewart platform footprint, incorporates electric actuators to deliver 6 degree-of-freedom motion. The test controller plays vibration spectra or time histories to provide exact control for comfort evaluation.
SERVICE AND SUPPORT

Five Point Inspection Process

Our number one goal is to eliminate downtime and make repairs that will deliver reliability and cost savings for years to come. When you send in your repair, it must work like new when you get it back. This is the Moog Global Support® promise.

• Incoming inspection will provide the customer details on the performance of the assembly. For actuators it could be leakage or response. For electronic modules it could be a non-functional connection. The inspection will also provide details to our technicians in regards to critical performance specs that need to be addressed.

• Technicians will then review engineering notes for any design improvements that may have been initiated since inception.

• Servo valves are removed and sent through the same rigorous evaluation, disassembly and test.

• Finally, the individual component or assembly will be tested to original specs to ensure the overhauled unit meets all design and performance criteria as if it were new.

Moog Engineering On Call For You

In today’s competitive manufacturing environment, machine performance plays a significant role in determining your bottom line. Moog Global Support is key to achieving cost-effective machine operation, day in and day out.

We are committed to providing world-class motion control products and solutions, taking customer support far beyond the initial sale. Our dedicated approach solves your problems, addresses your machine challenges, and allows you to achieve maximum productivity on a daily basis.

Repair Capabilities

Moog Global Support® is designed to keep your critical machines up and running at peak performance with only 100% genuine Moog replacement parts. Only Moog replacement parts can deliver the reliability, versatility and long life that you would expect from a world leader in motion control solutions. Each Moog part delivers essential components with precise dimensions, close tolerances and specifications. Because we understand the key role our parts play in the overall operation of your machine, we carefully inspect and test each repair to identify only those components that need replacement.

The Moog Difference

It’s time you worked with a partner who can offer both the world-class products you desire and collaborative expertise you need to reach the next level of performance. Contact us today to see the difference Moog can make.

THINKING ABOUT AN UPGRADE?

Our servo valve products include cleaning, repair and trade-in programs to keep you running or using the latest technology.

Our software maintenance agreements keep you up-to-date with the latest features, stabilizing updates, and ease-of-use improvements.

Our control hardware includes updates to processors, storage space, and multi-range conditioners as changes occur to add years of useful life to your initial purchase.

Do you have an analog test controller? Moog can provide a digital controller to provide commands to the existing controller as a transition to full digital or a drop-in replacement in one step. Why not take advantage of the many features digital controls can bring to your tests like advanced control loops and sequenced tests, built-in data acquisition, and settings that can be saved for future use. Contact Moog for more details!
TAKE A CLOSER LOOK.

Moog designs a range of products that complement the performance of those featured in this catalog. Visit our website for more information or contact the Moog facility nearest you.
