Moog Inc. is a worldwide designer, manufacturer, and integrator of precision motion control products and systems. Currently we are positioned on over forty military platforms ranging from legacy aircraft such as the F-15, F/A-18, and H-60 to modern platforms like the F-35 and new V-280. It is the goal of Moog Sustainment Engineering to support our customers beyond the scope of our products and services as they exist today. With reverse engineering investigations and innovative techniques, solutions can be created for parts, assemblies, and systems that were not originally manufactured or designed by Moog to improve fleet readiness.

REVERSE ENGINEERING
Many legacy aircraft have reliability concerns and obsolescence issues with parts or suppliers that are no longer in business. Moog engineers have the talent and expertise to solve these issues and are backed by state-of-the-art manufacturing facilities to ensure hardware is built to our high standard of quality.

REPAIR AND OVERHAUL SERVICES
Moog can provide cost-effective alternatives to challenging repair and overhaul issues. Our breadth of product support ranges from actuation and flight control systems to mechanical gearboxes, utility applications, electronics and more.

FABRICATION, ASSEMBLY & TEST
Moog has extensive manufacturing capabilities as well as an established supply chain to support the production of our current and future products. Our facility uses state-of-the-art machining centers and maintains in-house capability for manufacture of our most complex items. Moog also has the capability to perform acceptance test procedures and full qualification testing of hardware in house.
For inquiries about Sustainment Engineering services at Moog such as reverse engineering, spares orders, or repair/overhaul development and services, please contact sustainment@moog.com to connect with one of our sustainment services specialists.
