This notice provides a schedule for end of sales, last delivery and end of product support, service and repairs. It gives the timetable for Moog Axis Control Software (MACS) product obsolescence with key timelines and support options that are now available to you.

Date	Program Activity Moog Axis Control Software (MACS)
December 2022	End of Life announcement
August 2023	End-of-Sale (no longer open for orders or available for purchase)
October 2023	Final date for last delivery of product
October 2024	Final date of last product support, services and repairs

Moog offers the following product as functional replacements for MACS:

- Moog Application Software Suite ([MASS](#)), based on CODESYS 3. MASS is the successor of the MACS development environment. MACS is based on CODESYS 2.3. MASS includes a converter functionality to convert existing MACS application projects to MASS. MASS supports the MSC III Motion Controller and the MC600plus Machine Controller.

Moog offers the following product as functional replacements for MACS HMI:

- MASS web-based visualization: Use the Web Visualization functionality of MASS to display the visualization pages on a web browser: A PC, a Web Panel or any other devices, which runs in a web browser, can be used to display the visualization pages. The Web Visualization for MSC III requires at least a license key of level 'Green'. As the Web Visualization of MASS/ MSC III uses HTML5 technology, it runs on almost every actual browser without addition tools or software required.
- Use MASS and a display, which implements the CODESYS 3 Target Visualization.

Please contact your local Moog Sales Engineer to discuss any questions about this product obsolescence communication.

Yours sincerely,
