

PREVENTATIVE MAINTENANCE PROGRAM

Designed for protection from unplanned downtime

Globally, Moog servovalves are the choice of design engineers and machine operators who demand a higher level of reliability and motion control performance. To help these critical components perform at their peak we introduce the Moog Preventative Maintenance Program.

Moog's Preventative Maintenance Program is designed for our customers who want protection from unexpected downtime and the ability to plan their maintenance schedules.

At the heart of this service is a yearly scheduled examination and thorough testing of your Moog servovalves by an experienced expert with access to the latest performance specifications for your particular model. During the examination, parts are replaced to help boost machine productivity and efficiency, eliminating minor problems before they turn into major repairs.

The program includes a variety of services for a fixed annual fee:

- Incoming functional test
- Complete strip down
- Replacement of o-rings, filters and seals
- Ultrasonic cleaning of all parts
- Back-flush of the main stage (where applicable)
- Final test and report with Moog expert advice

So much depends on your Moog servovalves. Let Moog, the motion control experts help you keep them working hard for your high-performance equipment.

ADVANTAGES

- Better management and control of maintenance budgets through proactive planning.
- Reduction in downtime caused by worn or underperforming servovalves.
- Discount from the regular price list on any spare parts.
- Spare servovalve while yours is out of action.
- Fast Track Priority Service.
- Can be extended to other Moog products such as servoactuators, radial piston pumps, servodrives and servomotors.

Our service programs are tailored by country and customer to meet unique requirements. A specific service may not be available in all locations or to all customers. Please contact your nearest Moog facility for further information.
