

ELECTROHYDROSTATIC PUMP UNIT

Compact pump unit helps leverage the benefits of both hydraulic and electric actuation.

Electrohydraulic Pump Units (EPU) are emerging as viable options for industrial machine builders seeking for compact alternatives to traditional hydraulic or electromechanical motion control solutions.

The Moog EPU is at the heart of electrohydraulic actuation and combines the advantages of both actuation technologies in a self-contained product delivering a high degree of energy efficiency and environmental cleanliness.

It helps enable the deployment of a decentralized drive system which eliminates the need for a hydraulic power unit and complex piping, thereby reducing the overall machine footprint.

The compact product design also features a unique interface that enables direct mounting on to a cylinder minimizing the requirement of additional space on each axis and reducing the number of components required.

The Electrohydraulic Pump Unit is available either as a stand-alone product or as an entire system, called the Electrohydraulic Actuation System (EAS). The EAS combines the electrohydraulic pump unit and any optional parts a customer might need, such as servo drives, manifolds, or cylinders. All components are Moog products that meet the highest standards of reliability and quality.

ADVANTAGES

- High energy efficiency
- Increased productivity
- Reduced machine footprint
- Reduced maintenance costs and total cost of ownership (TCO)

APPLICATIONS

- Metal forming and presses
- Injection molding and die-casting
- Gas and steam turbines
- Wind turbine pitch control
- Marine
- Heavy industry

SPECIFICATIONS

TECHNICAL DATA

EPU Series	19 ccm	32 ccm	80 ccm	140 ccm	250 ccm
Maximum Flow	85 l/min (22.5 gpm)	118 l/min (31.2 gpm)	216 l/min (64.8 gpm)	322 l/min (685.1 gpm)	450 l/min (118.9 gpm)
Maximum AB pressure	350 bar (5,000 psi)				
Pump version	Radial piston pump, fixed or dual displacement				
Motor version	Brushless servo motor, natural or liquid cooled				
Temperature range					
Ambient	-15 to +60 °C (+5 to +140 °F)				
Fluid	-15 to +80 °C (+5 to +176 °F)				
Seal material	FKM				
Pilot pressure supply	External				
Operating fluid	Mineral oil according to DIN 51524 , HFD, others upon request				
Viscosity	Allowable viscosity operational range 12 to 100 mm ² /s (12 to 100 cSt); Recommended hydraulic fluid viscosity class VG 46 to VG 100 according to ISO 3448; Maximum viscosity 500 mm ² /s (500 cSt) during start-up with electric motor at 1,800 r/min				
System filtration	<ul style="list-style-type: none"> NAS 1638, class 9 ISO 4406, class 20/18/15; obtained with filter fineness of $\beta_{20} = 75$ 				
Installation position	Any				

Pump front view, size 32 (as an example)

Installation drawing, size 32 (as an example)
