The medical market is a market in motion – both literally and figuratively. With the Baby Boomers reaching retirement age and technology advancing almost exponentially, this is an exciting market for companies that supply components and assemblies into medical applications. The marketplace is vast with products ranging from simple syringes and disposables to complex diagnostic machinery such as CT scanners and MRI equipment. Embedded in the overall market are many niche markets that require motion components.

**Motor Advantages**
Motors for typical medical applications, particularly portable ones, are required to be:
- Efficient
- Quiet
- Reliable - long life
- Arcless - produces no sparks or arcing in normal operation
- High power density - high torque / cost / size ratio
- Precision rotor balance
- High speed (centrifuge, saw and drill applications)

Silencer® series brushless DC motors offer these advantages and more. With a broad array of offerings (seven base frame sizes, high speed and high power versions, motors with integral drive electronics, inside and outside rotor versions, drive electronics, optional gearheads, brakes, encoders), Moog is well positioned to provide solutions to various medical applications by combining our expertise in air moving solutions with our innovative motor technology. Our BSG23 motor was specifically designed to meet the requirements for portable oxygen therapy devices. With torques up to 114 oz-in (0.805 Nm) and efficiencies of 80+ percent, this motor will significantly lengthen the battery life of portable medical devices.

**Air Moving Advantages**
The Moog AirMax™ series of blowers and tailored air moving products for medical applications offer:
- High power density (more airflow at pressure per unit volume)
- High efficiency brushless DC motors (no arcs / sparks during commutation)
- Integrated drive electronics with speed control and alarm options
- Wide variety of input voltages AC and DC
- Precision dynamic balance for low vibration
- Reliable – long life ball bearings
- Low noise operation

The Moog AirMax series of fans and blowers provide excellent output power per unit volume through the use of compact, high energy 3-phase brushless DC motors and efficient airfoil design. The motor utilizes high energy rare earth magnets and tailored drive electronics to provide the maximum airflow in the minimum amount of system space. These high efficiency compact air movers use high reliability, long-life ball bearings with specially formulated lubrication to extend the life without the need to re-lubricate. For more information about how this product can be tailored to fit your specific application, contact our applications engineers.
Slip Ring Advantages
Slip rings in medical applications feature the following:
- Fiber brush technology with long maintenance-free life and minimal wear debris
- Low audible noise for overall quieter mechanical system operation
- Optical channels for high-speed data communications (fiber optic rotary joints)
- High circuit density and compact design
- Large bore designs with an inside diameter up to 50 inches (1270 mm)

As a world leader in slip ring design and manufacturing, Moog is well positioned to work closely with medical device manufacturers to integrate slip rings into their designs.

Fiber Optic Rotary Joint Advantages
Key attributes:
- Low insertion loss and rotational variation
- Optimized for wavelengths used for medical optical imaging
- Ultra-low back reflection
- High rotational speeds
- Can be combined into integrated and customized FORJ / BN series motor / resolver packages

Key specifications:
- 1.5 dB max insertion loss, includes 0.5 dB maximum rotational variation
- Better than 40 dB return loss
- 10,000 rpm, contact factory for higher speeds

Fiber Optic Rotary Joints (FORJs) are to optical signals what electrical slip rings are to electrical signals, a means to pass signals across rotating interfaces, particularly when transmitting large amounts of data. FORJs maintain the intrinsic advantages of fiber end to end.
