

## Sabre Series

D38999 Size 11-02 Optical Transceiver,  
PCB Mount, \*ELIO®, 850nm,  
ARINC 818, 803, 804 & 805

Single Port, Jam Nut

### FEATURES

- Compliant with ARINC 664, 818, 803, 804 & 805
- Suitable for Fast Ethernet, Gigabit Ethernet, 1x/2x/4xFibre Channel and sFPDP applications from 100Mbps to 5.0Gbps
- Maximum optical channel bit error rate less than  $1 \times 10^{-12}$
- Operating temperature range from -55°C to +85°C
- Shock and vibration resistant per RTCA / D0-160E
- Olive drab cadmium over electroless nickel plating meets stringent corrosion performance specifications
- Twelve pin PCB footprint with Loss of Signal (LOS) function
- ELIO® 2.5mm ceramic optical fiber ferrule connector interface per EN 4531, ABS 1379 and ARINC 801
- Compatible with Mil-Dtl-38999 ELIO® size 11-02 connectors
  
- Moog Protokraft manufacturing site is certified to ARINC805 Rev 3.
- ARINC 805 Rev 3 conformance is verified using state of the art measurement and test equipment.
- ARINC 805 conformance during installation and operation is achieved by adherence to maintenance best practices as employed by the end user.

### APPLICATIONS

Sabre series 38999 size 11-02 optical transceivers enable high speed network communications over long distances in harsh environments.

- Fast or Gigabit Ethernet switches and peripherals
- Fibre Channel switches and peripherals
- ARINC 818 video interfaces
- sFPDP data links

Sabre series 38999 size 11-02 optical transceivers provide a rugged optical interface that is compliant with ELIO® 2.5mm ceramic optical ferrules\*.

The multimode optical fiber interface supports applications where copper cable link distance, bandwidth, weight or bulk make the use of twisted pair, twinax or quadra

One Duplex Channel Operating from 100Mbps to 5.0Gbps

### DESCRIPTION

Sabre series 38999 size 11-02 optical transceivers consist of optoelectronic receiver functions integrated into a wall mount D38999 optical connector. The optical transmitters are 850nm VCSEL lasers. The transmitter input lines are driven with differential CML signals applied to the transmitter (TX+ and TX-) lines. The TX\_Fault circuit disables the optical transmitter output when the optical output power or internal current exceeds predefined limits. A CMOS fault signal is generated on the TX\_Fault line upon a transmitter optical or electrical fault condition. The fault signal is latched until reset by a toggle of TX\_Dis or VCC.

The optical receivers consist of PIN and preamplifier assemblies and limiting post-amplifiers. Outputs from the receivers consist of differential CML data signals on the receiver (RX+ and RX-) lines and single ended CMOS indicator functions on the Loss of Signal (LOS) lines. The receiver data lines are squelched upon LOS assertion, preventing errant data generation when an invalid incoming optical signal is presented to the transceiver.

The optical mating interface of the Sabre series 38999 size 11-02 optical receivers is a Souriau D38999 ELIO® fiber optic cable plug per EN 4531. The electrical interface to the Sabre series D38999 size 11-02 optical transceiver is a 12 position pin header suitable for thru-hole soldering to a flexible or rigid printed circuit.

Sabre series D38999 size 11-02 optical receivers are vibration isolated, environmentally hardened components designed for use in harsh environment applications.

## ABSOLUTE MAXIMUM RATINGS

Absolute maximum limits mean that no catastrophic damage will occur if the product is subjected to these ratings for short periods, provided each limiting parameter is in isolation and all other parameters have values within the performance specification. It should not be assumed that limiting values of more than one parameter can be applied to the product at the same time.

Parameter	Symbol	Minimum	Typical	Maximum	Unit
Storage Temperature	T <sub>s</sub>	-55		+100	°C
Supply Voltage	V <sub>cc</sub>	-0.5		+4.5	V
