

## QUIET HYDRAULIC ROTARY ACTUATOR

Moog's quiet hydraulic rotary actuators are used across multiple platforms for the U.S. Navy. Requirements for performance are based on envelope, environmental, structural and noise goals of the U.S. Navy. This family of actuators is designed, produced and tested by Moog to meet and exceed the stringent goals set forth by the Navy.

Features include materials of construction for the surface and subsurface marine environment. Designs for MIL-STD shock and vibrational testing. Sealing for compatibility with fluids and chemicals that may be used. Designed for the 40-50 year life of the vessel with little or no maintenance.

Moog is a worldwide designer, manufacturer, and integrator of custom precision motion control and stabilization systems for the defense industry. Our electromechanical rotary and linear actuators are ideal for new systems, upgrades to older hydraulic systems, and for sustainment service.

### KEY FEATURES

- Rack and pinion design
- Torque output exceeding 50,000 FTLB
- Pressure envelopes exceeding 4500 PSI
- Rotations exceeding 180°
- Positional feedback
- Design, tested and qualified to MIL-STD-810
- Configurations for envelope and mounting (optional)
